

ACTIVITY 1: Basic Output

Task: Display your name and course.

```
<?php
echo "Name: Juan Dela Cruz <br>";
print "Course: BSIT";
?>
```

Guide Questions:

What symbol is used to end a PHP statement?

- A PHP statement ends with a **semicolon (;)**

Which is faster: echo or print?

- echo is slightly faster than print

ACTIVITY 2: Multiple Outputs

Task: Display 3 different messages.

```
<?php
echo "Welcome!<br>";
echo "This is PHP.<br>";
echo "Enjoy coding!";
?>
```

Variables

Key Concept

- Variables start with \$
 - No need to declare data types
 - Case-sensitive
-

ACTIVITY 3: Declaring Variables

Task: Create variables and display them.

```
<?php
$name = "Maria";
$age = 20;

echo "Name: " . $name . "<br>";
echo "Age: " . $age;
?>
```

ACTIVITY 4: Variable Rules

Fix the errors in the code:

```
<?php
$1name = "Ana";
$Age = 18;
echo $age;
?>
```

Expected Fix:

- Variable names should not start with numbers
- Case sensitivity matters

FIX CODE:

```
<?php

$name = "Ana";

$age = 18;

echo $age;

?>
```

PART 3: Operators

Types of Operators

- Arithmetic: + - * / %
 - Assignment: = += -=
 - Comparison: == != > <
-

ACTIVITY 5: Arithmetic Operators

Task: Perform operations.

```
<?php
$a = 10;
$b = 3;

echo "Addition: " . ($a + $b) . "<br>";
echo "Subtraction: " . ($a - $b) . "<br>";
echo "Multiplication: " . ($a * $b) . "<br>";
echo "Division: " . ($a / $b);
?>
```

ACTIVITY 6: Assignment Operators

Task: Predict the output.

```
<?php
$x = 5;
$x += 3;
echo $x;
?>
```

Question:

What will be the output?

- The output will be number eight (8)

ACTIVITY 7: Comparison Operators

Task: Check conditions.

```
<?php
$a = 10;
$b = 5;

var_dump($a > $b);
var_dump($a == $b);
?>
```

MINI PROJECT

Task: Create a simple calculator.

```
<?php
$num1 = 8;
$num2 = 4;

echo "Sum: " . ($num1 + $num2) . "<br>";
echo "Difference: " . ($num1 - $num2) . "<br>";
echo "Product: " . ($num1 * $num2) . "<br>";
echo "Quotient: " . ($num1 / $num2);
?>
```
